# Who's Stealing Your Bandwidth?

*Leader in Unified Communications Educates Businesses on the Importance of Proper Internet Utilization and Best Practices*

WINSTON SALEM, NC – January 20, 2015 - TDArx, a leading provider in unified communications, announced today that the company is educating its customers on the recent expansion of bandwidth monitoring and management solutions. Essentially, bandwidth monitoring is the practice and policy of tracking the utilization of company bandwidth between all employees, software applications and desktops. The growth of bandwidth management solutions in recent years is due primarily to growth of company provided and personal devices (smart phones, tablets, etc.) connected to an organization's network.

According to Mike Shuping, President of TDArx, "Any company that provides cloud-devices, software or applications that run over a data network, need to ensure that bandwidth is being consumed properly." This notion reflects the current state of most solutions, which are simply being strained to the point where many business owners notice that the devices, applications and software underperform. In essence, it's like siphoning out all of the gas from a car, and then blaming the car for running on fumes. The problem lies with poor policy making and a lack of guidelines for employees on how to properly utilize the Internet at a place of business.

"On many occasions, we've found that up to 40% of a company's employees are choking bandwidth and making it harder for other people to do their work," Shuping added. "We conduct quarterly reviews with our customers where we assess the performance of all of the technology that we provide. It gives our clients a global perspective on their network and what its performance is and how it can be better. Our overarching goal is to make sure that our customers' businesses are performing at more productive levels and this is how we quantify productivity. This is why we lead these meetings with device performance audits. With bandwidth being the central resource upon which nearly every technology relies, we have to make sure that this is being consumed in accordance with best practices before any other steps are taken."

In addition, to the underperformance of the network and the drain on productivity this can cause, many business owners appreciate technology audits, like the one provided by TDArx, because they uncover how much time employees are spending on various sites that have nothing to do with their job. This gives tremendous insight on the productivity, or lack thereof, with certain employees. One of the quickest ways to immediately boost customer profitability is to restrict the bandwidth of employees to sites to those that are exclusively productive in nature, as opposed to entertainment-based sites.

"In some cases, employees simply don't know that their bandwidth consumption is slowing the rest of the team down. New parents can put their children in day care and want to stream the video from time to time to see how their child is doing throughout the day. Inherently there's nothing wrong with this, if done on occasion. However, when a parent leaves one of these streaming videos up while they begin working on other things, the rest of the team will notice the lag time that slows down their own desktop. The network is simply a shared resource that needs some guidelines in place, especially in the new employee handbook. With a comprehensive bandwidth consumption policy in place, business owners can rest assured that their software, hardware and online tools will all function at optimal levels."

## ABOUT TDArx, INC..

TDArx, Inc. came into existence when TeleData Services, Inc., a regional leader in business communications, and Arx Technology, Inc., a leading provider of computer and data networking technologies, merged in January 2008.  The merger

enhances TDArx's expertise in a full line of communication technology, which helps its customers increase their profitability and improve competitive advantage.

TeleData Services, Inc. was founded in 1988 by Mike Shuping with partners Michael Nester and Larry Halsey. For the past 20 years, TeleData Services has been and is committed to establishing and maintaining a dynamic partnership with every customer. Extensive technology and service experience allowed the TeleData Services, Inc.

team to develop an understanding of each customer's unique telecommunications requirements, and to respond to those requirements quickly and effectively.

Founded in 2001 by owner Wesley Walker, Arx Technology had been fulfilling the IT needs of Triad businesses.  The company has over 350 customers and eight certified engineers.  These professionals have a number of advanced industry certifications including Microsoft, Macintosh, Cisco, Citrix, Novell, and Linux

and provides IT-based growth strategies for small and medium businesses. Arx specializes in data, technology and network consulting, security and support.

Today, TDArx is poised to help its customers maximize the return on their investment in communication technology.  With TDArx, you can focus on your business, while we focus on your IT!  For more information, please contact us at (336) 896-0808 or visit www.tdarx.com.
